POSITIV+TECHNOLOGY

AI DISCOVERY WORKSHOP

START WITH YOUR BUSINESS. FIND WHERE AI COULD MAKE A MEANINGFUL DIFFERENCE.

WHAT WOULD YOU LIKE YOUR BUSINESS TO DO BETTER?

Quicker customer responses. Less administration. More capacity to take on work.

Your business has things it wants to improve. Positiv Technology's AI Discovery Workshop starts there.

We work with you to understand what you want to achieve, what gets in the way and where AI could make a worthwhile contribution. Together, we explore the opportunities, challenge the assumptions and establish practical next steps.

START WITH A BUSINESS CHALLENGE

Every workshop is shaped around your business. Here are some examples of the questions, challenges and objectives you could explore in an AI Discovery Workshop:

"Still juggling spreadsheets to keep work moving?"

Explore how connecting your systems and applying AI can help interpret updates, identify missing details and move work to the right person.

The business test: less chasing and duplicate entry, with a clearer view of progress.

"Are you making the most of your company's data?"

Find out where AI can bring together information from reports, records and business systems to help your people answer questions and make better-informed decisions.

The business test: less time piecing information together and more time acting on it.

"Want to free your people from repetitive admin?"

Assess the potential for AI to read incoming documents, extract relevant details and route work between teams, with people reviewing exceptions.

The business test: less manual handling and rework, with more capacity for work that needs human judgement.

Together, we'll uncover what matters to your business and shape the workshop around your goals, processes and priorities.

AI DISCOVERY WORKSHOP

POSITIV+ TECHNOLOGY

A PRACTICAL WORKING SESSION, BUILT AROUND YOU

Before the workshop, we gather initial information about your goals, teams and processes.

During a four-hour session with a Business AI specialist, we examine your priority challenges and assess possible approaches against likely value, cost, effort and risk. We consider the information, systems and people needed to make them work.

Sometimes the sensible first step is a simpler process, better information or existing automation. Recognising that is part of finding genuine value.

A CLEARER BASIS FOR YOUR NEXT DECISION

Preparation + four-hour workshop with a Business AI specialist + follow-up plan

Prioritised opportunities

A shortlist of 3-4 AI opportunities focused on real operational pain points, business goals, with measurable business value.

Estimated business benefit

High-level view of likely time savings, capacity gains, service improvement or commercial upside.

Cost and considerations

Indicative costs, effort, risks, complexity and key dependencies for each opportunity to inform your decisions.

Practical next steps

A high-level roadmap to investigate, validate or progress the strongest opportunities - giving leadership a practical route to delivery.

WHAT WOULD YOU LIKE YOUR BUSINESS TO DO BETTER?

Tell us about the challenge you want to tackle.

We'll discuss how an AI Discovery Workshop could help.
